
Outcomes Management: Using Data for Decision Making

TABLE OF CONTENTS

CHAPTER 1. Introduction to Data-Based Outcomes Management	1
The system of outcomes management	1
Data-based decisions	2
Critical measures of performance	4
Definitions	8
Study management issues	15
Study model	16
Outcomes management study worksheet	17
CHAPTER 2. Plan: Select the Topic and Study Population	25
Select the topic	25
Develop the hypothesis	26
Select the study population	31
Sampling techniques	31
CHAPTER 3. Do: Identify Data Elements and Gather Data	39
Identify data elements	39
Types of data	40
Operationalize the data elements	42
Design the data collection instrument	44
Establish quality controls	48
Build the data file	49
CHAPTER 4. Check: Report and Analyze Data	53
Check data accuracy and reliability	53
Tools for statistical analysis	54
Summarizing numbers (mean, median, mode)	54
Numbers that measure variability (range, standard deviation, variance)	56
The histogram	59
Display and analyze the study results	60
The scatter diagram	60
The correlation coefficient	63

Regression analysis	66
The run chart	68
Tests of significance	71
Chi-square	73
Z-score	77
Additional statistical and graphic tools	79
Suggested readings	80
CHAPTER 5. Act: Establish Guidelines Based on Results	83
Actualizing the results	83
Techniques for implementing study findings	86
Develop performance measures	92
Collecting performance measurement data	93
The control chart	96
The impact of variation on future predictions	99
Constructing a control chart	100
Reacting to variation	102
Suggested readings about control charts	103
CHAPTER 6. Recycle: The next steps	105
The recycle phase	105
